Rotary Screw Compressors
SX Series
With the world-renowned SIGMA PROFILE ♻
Free air delivery from 0.26 to 0.80 m³/min, Pressure 8 - 11 - 15 bar
More air for your money
Kaeser’s engineers have significantly boosted the performance of SX series compressors compared to previous models. This impressive feat has been achieved both through airend optimisation and the minimisation of internal pressure losses. Therefore, depending on drive the power, these enhancements have resulted in a free air delivery increase of up to 14 percent.

Energy-saving performance
The efficiency of a machine depends on the total costs incurred throughout the equipment’s entire service life. With compressors, energy costs account for the lion’s share of total expenditure. Kaeser therefore designed its SX series compressors with optimum energy efficiency in mind. Refinements to the energy-saving SIGMA PROFILE airend have significantly increased the performance of these versatile compressors. The addition of the SIGMA CONTROL 2 internal controller and Kaeser’s unique cooling system have helped to push the boundaries of efficiency even further.

Optimised design
The new SX models all share logical and user-friendly design throughout. For example, the left-hand enclosure panel can be removed in a few simple steps and allows excellent visibility of the system’s intelligently laid out components. Needless to say, the new SX series was designed to ensure best possible access to all service points. When closed, the sound-absorbing compressor enclosure keeps operational sound levels to a minimum thereby ensuring a pleasantly quiet work environment. In addition, the enclosure features four inlet openings for separate airflow cooling of the compressor, the motor and the switching cabinet and for compressor intake air. Last, but not least, SX series compressors are impressively compact, which makes them the perfect choice for applications where space is at a premium.

Modular system concept
SX series compressors are available as standard versions, as so-called “T” models that are equipped with an integrated, thermally shielded refrigeration dryer and as “AIRCENTER” models that additionally include an underslung air receiver (see right). Kaeser’s intelligent modular design therefore offers incredible flexibility.

The efficiency of a machine depends on the total costs incurred throughout the equipment’s entire service life. With compressors, energy costs account for the lion’s share of total expenditure. Kaeser therefore designed its SX series compressors with optimum energy efficiency in mind. Refinements to the energy-saving SIGMA PROFILE airend have significantly increased the performance of these versatile compressors. The addition of the SIGMA CONTROL 2 internal controller and Kaeser’s unique cooling system have helped to push the boundaries of efficiency even further.

Optimised design

The new SX models all share logical and user-friendly design throughout. For example, the left-hand enclosure panel can be removed in a few simple steps and allows excellent visibility of the system’s intelligently laid out components. Needless to say, the new SX series was designed to ensure best possible access to all service points. When closed, the sound-absorbing compressor enclosure keeps operational sound levels to a minimum thereby ensuring a pleasantly quiet work environment. In addition, the enclosure features four inlet openings for separate airflow cooling of the compressor, the motor and the switching cabinet and for compressor intake air. Last, but not least, SX series compressors are impressively compact, which makes them the perfect choice for applications where space is at a premium.

Modular system concept

SX series compressors are available as standard versions, as so-called “T” models that are equipped with an integrated, thermally shielded refrigeration dryer and as “AIRCENTER” models that additionally include an underslung air receiver (see right). Kaeser’s intelligent modular design therefore offers incredible flexibility.
SX Series

The new standard for efficiency and quiet operation

Sigma Profile airend
At the heart of every SX system lies a premium quality airend featuring Kaeser’s SIGMA PROFILE rotors. Moreover, KAESER’s product engineers have managed to enhance performance and efficiency still further. The use of IE2 electrical drive motors has also contributed to additional energy savings.

SIGMA CONTROL 2
This advanced controller ensures efficient compressor system control and monitoring. Communication is made simple thanks to the generously sized display and a RFID reader. Multiple interfaces for exceptional flexibility. The SD card slot makes updates quick and easy.

Even quieter
The new cooling system combines optimum sound damping with enhanced cooling. Normal conversation can take place right next to the running compressor.

Enhanced efficiency
The new SX screw compressors are up to 1.2 percent more efficient than their predecessors. Based on an electricity cost of 0.20 €/kWh, this translates into energy-related savings of approximately €1,242 (for SX 4) over ten years, assuming 1,500 hours of operation annually.
SX T series

With integrated space-saving and efficient dryer

Energy-saving control
With its innovative energy-saving control, the integrated refrigeration dryer ensures efficient operation at all times. The dryer is active only when compressed air actually needs to be dried. This approach therefore achieves the required compressed air quality with maximum efficiency.

Efficient cooling
Kaeser’s innovative cooling system uses a high efficiency dual flow fan and separate air flow channels for the compression air, cooling air for the airfluid cooler and the motor. This system enables dependable operation in ambient temperatures of up to 45°C. The dryers in T-models feature separate cooling.

Automatic drain
The refrigeration dryer is equipped with an ECO DRAIN automatic level-sensing condensate drain that operates without pressure loss. This both saves energy and considerably enhances the reliability of the compressed air supply.

Quality: Made in Germany
All rotary screw compressors and refrigeration dryers are built to Kaeser’s renowned quality standards at the company’s vertically integrated manufacturing facilities in Coburg and Gera, Germany.
SX AIRCENTER

The compact and efficient compressed air package

Connect and go
All this compact compressed air package needs is to be connected to the power supply and compressed air system. That’s it – no further installation work is required.

Long-lasting air receiver
All Kaeser air receivers are hot-dip galvanised both internally and externally in accordance with DIN EN ISO 1461, which means they last approximately 3 times longer than conventional models.

Service-friendly design
The left-hand housing cover is easily removed to allow excellent accessibility to all service points. Moreover, all models are highly compact, making them ideal for environments where space is at a premium. Inspection glasses allow convenient inspection of fluid levels and drive belt tension whilst the unit is in operation.

Excellent component access
All maintenance and service components are easily accessible, which significantly reduces the downtime associated with service and maintenance tasks. This helps to increase compressed air availability and minimises operating costs.
## Equipment

### General design

- **Complete unit**
  - Ready-to-run, fully automatic, super-silenced, vibration damped, all panels powder coated.
  - Suitable for use in ambient temperatures up to +45°C.

- **Airend**
  - Genuine KAESER rotary screw, single stage airend with Sigma Profile and cooling fluid injection for optimised rotor cooling.

- **Electric motor**
  - Premium efficiency IE2 German electric motor to IP 54.

### Fluid and air flow

- Honeycomb air intake filter, pneumatic inlet and venting valves, cooling fluid separator tank with triple separation system, pressure relief valve, minimum pressure / check valve, thermostatic valve and fluid filter within the cooling fluid circuit, fluid / compressed air combination cooler.

### Refrigeration dryer (with T-version)

- With electronically controlled condensate drain. Refrigerant compressor with energy-saving, cycling shutdown feature; linked to operational status of the compressor when inactive. Alternatively, continuous operation can be selected on site.

### Electrical components

- Ventilated control cabinet to IP 54, automatic star-delta starter, overload relay, control transformer.

**SIGMA CONTROL 2**

- “Traffic light” LED indicators show operational status at a glance, plain text display, 30 selectable languages, soft-touch keys with icons, fully automated monitoring and control.
- Selection of Dual, Quadro, Vario and continuous control as standard.
- Interfaces: Ethernet; additional optional communication modules for: Profinet DP, Modbus, Profinet and DeviceNet.
- SD-card slot for data-logging and updates. RFID reader, web server.

KAESER – The world is our home

As one of the world’s largest manufacturers of rotary screw compressors, KAESER KOMPRESSOREN is represented throughout the world by a comprehensive network of branches, subsidiary companies and authorised partners in over 100 countries.

With innovative products and services, KAESER KOMPRESSOREN’s experienced consultants and engineers help customers to enhance their competitive edge by working in close partnership to develop progressive system concepts that continuously push the boundaries of performance and compressed air efficiency. Moreover, the decades of knowledge and expertise from this industry-leading system provider are made available to each and every customer via the KAESER group’s global computer network.

These advantages, coupled with KAESER’s worldwide service organisation, ensure that all products operate at the peak of their performance at all times and provide maximum availability.
